Portfolio Copy — Final Version

Updated 2026-04-11. Ready for implementation.

Yellow = changed from original Green = new text added ~~Red strikethrough~~ = removed

Homepage Intro

TITLE

Senior Designer ~~& Illustrator~~

STATEMENT

Visual systems and art direction across brand and product, using AI tools as part of the creative process.

~~I design across brand and product for clarity and meaning, combining design practice with AI-assisted workflows.~~

1. American Greetings

HOMEPAGE CARD LABELS

Art Direction · Illustration · Visual Systems

HOMEPAGE CARD HOOK (1-2 SENTENCES ONLY)

Badge system for American Greetings' membership platform. 30 achievements designed to scale across categories and UI contexts.

~~Designed a scalable illustrated gamification badge system for a membership platform to improve engagement and user experience. Defined the visual direction and translated 30+ achievement concepts into a cohesive set of illustrated badges aligned with the platform's tone and brand.~~

PROJECT PAGE HERO INTRO (MERGED WITH OVERVIEW)

American Greetings is a greeting card and digital messaging platform. Working with the Digital Design Director, I designed a ~~gamification~~ badge system for their membership product ~~,~~ to encourage engagement and repeat usage. The system spans milestones, seasonal achievements, feature exploration, and mobile challenges, all integrated within the platform.

> Merged intro + overview into one paragraph. Removed "gamification" (jargon). Added team context (Digital Design Director).

REMOVED Separate Overview section

~~American Greetings is a greeting card and digital messaging platform. I worked on a gamification feature for their membership product, designing a badge system to encourage engagement and repeat usage. The system included categories such as milestones, seasonal achievements, feature exploration, and mobile app challenges, all integrated within the platform.~~

PROJECT PAGE YEAR

2025

PROJECT PAGE ROLE

Art Direction, Illustration

PROJECT PAGE TOOLS

Illustrator, Procreate

PROJECT PAGE CHALLENGE

The badge system needed to scale across 30+ achievements ~~,~~ with room to grow, while remaining consistent. Each badge had to work across multiple UI backgrounds without losing clarity ~~or impact~~. The visuals also needed to feel distinct across categories while staying aligned with the brand.

PROJECT PAGE APPROACH

I explored a few visual directions and selected one that balanced clarity, playfulness, and scalability. A shared badge shape and composition rules kept all designs connected while allowing variation across concepts. Each badge was developed by translating its achievement into a clear visual idea, with future animation considered during design.

PROJECT PAGE OUTCOME

Delivered a complete set of 30+ badges for the initial release, covering multiple categories and use cases within the platform.

REMOVED Reflection

~~Designing within UI and brand constraints while maintaining variety across a large set of concepts required a clear system from the start. This helped streamline the process and provided a solid foundation for future expansion.~~

2. Farm Sanctuary

HOMEPAGE CARD LABELS

Education · Visual Systems · Infographics

HOMEPAGE CARD HOOK

Visual system spanning the full K-12 range for a Humane Education program, reaching 250,000+ students across the U.S.

~~Designed a scalable visual system for a K-12 Humane Education program, reaching 250,000+ students across the U.S.~~

> Minor trim: removed "Designed a scalable" (generic opener).

PROJECT PAGE HERO INTRO (MERGED WITH OVERVIEW)

Farm Sanctuary is a U.S.-based nonprofit focused on animal protection ~~and food system awareness~~. Working with the Humane Education Programs Manager and marketing team, I designed and illustrated the K-12 Humane Education curriculum covering lesson plans, student materials, teacher guides, and presentations across elementary, middle, and high school levels.

> Merged intro + overview. Added team context. Removed "food system awareness" (detail for the body, not intro).

REMOVED Separate Overview & Intro

~~A scalable visual system designed for Farm Sanctuary's K-12 Humane Education curriculum, translating complex topics around animal welfare, food systems, and environmental impact into structured educational materials.~~

PROJECT PAGE YEAR

2017–2019

PROJECT PAGE ROLE

Art Direction, Illustration, Layout

PROJECT PAGE TOOLS

Illustrator, InDesign, Photoshop, PowerPoint

PROJECT PAGE CHALLENGE

The curriculum needed to meet U.S. educational standards while addressing sensitive topics like animal welfare, food systems, and environmental impact. It also had to work across a wide age range, from young children to teenagers, and be practical for educators in real classroom settings.

PROJECT PAGE APPROACH

I developed a consistent visual language across all age groups. Illustration translated abstract or sensitive topics into clear, accessible visuals while supporting storytelling. Layouts were structured to help educators navigate and use the materials efficiently, focusing on readability, hierarchy, and ease of use.

PROJECT PAGE OUTCOME

The curriculum has been used by educators across the U.S., reaching over 250,000 students. The program received the Excellence Award (2019) and the Educator's Choice Award (2024).

REMOVED Reflection

~~Using a single visual language across all age groups helped maintain consistency and made the system easier to scale. Looking back, I would formalize this further by building a clearer component and illustration library from the start, to improve reuse and scalability.~~

3. Able

HOMEPAGE CARD LABELS

Product · Illustration · Visual Systems

HOMEPAGE CARD HOOK

Two illustrated directions for onboarding for a health & wellness product tested against real users. The selected style shipped in onboarding for a wellness app.

~~Explored and defined an illustration style for the onboarding experience within a subscription-based wellness mobile app. Direction was selected based on A/B testing focused on engagement and relatability.~~

PROJECT PAGE HERO INTRO (MERGED WITH OVERVIEW)

Able is a subscription-based health & wellness app. Working with the Product Lead and with other Product Designers and Illustrators within the Product Design Team, I developed an illustration style for onboarding and in-app experiences, with the goal of establishing a scalable visual direction for ongoing product use and in-app content.

> Merged intro + overview. Added team context. Removed asterisk/footnote about product pivot.

REMOVED Separate Overview, Intro, and asterisk

~~Illustration system exploration for Able, a subscription-based wellness mobile app. The initial scope focused on defining and testing visual directions for the onboarding flow, with the goal of establishing a scalable illustration style for product use and future content creation, including in-app stories.~~

~~* Able later evolved into a broader platform offering personalized health and wellness coaching programs.~~

PROJECT PAGE YEAR

2021–2022

PROJECT PAGE ROLE

Product Illustrator

~~Product Illustrator — Team Coordination~~

> Removed "Team Coordination" — vague, and the team context is now in the intro.

PROJECT PAGE TOOLS

Figma, Illustrator

PROJECT PAGE CHALLENGE

Define an illustration style for onboarding that felt engaging and relatable for first-time users, could scale across onboarding and in-app use, and could be validated through user testing.

> Rewritten as prose instead of awkward list format.

PROJECT PAGE APPROACH

Explored multiple illustration directions and refined two for onboarding use. Iterated through team review cycles, then prepared assets for A/B testing focused on engagement and relatability.

PROJECT PAGE OUTCOME

The selected style was implemented in the onboarding flow following A/B testing results. Additionally, explorations for in-app content extension were created.

> Kept in-app explorations, removed "but not implemented due to a product pivot."

REMOVED Reflection

~~Clear system constraints and early testing improved decision-making. The work reinforced how illustration tone directly affects user perception in onboarding, especially in wellness products.~~

4. impact.com

HOMEPAGE CARD LABELS

Brand · Marketing · Data Visualisation

HOMEPAGE CARD HOOK

Reports, infographics, and campaign materials for a partnerships management platform. Complex data made visual within an established brand system.

~~Designed marketing materials, infographics, research reports, and decks for a partnerships management platform. Translated complex data into clear, engaging visual narratives within an established brand system.~~

PROJECT PAGE HERO INTRO (MERGED WITH OVERVIEW)

impact.com is a partnerships management platform. Working with the marketing director and internal teams, I designed reports, decks, and campaign materials within an established brand system, translating complex data into clear visual communication.

> Merged intro + overview into one clean sentence. Team context already present.

REMOVED Separate Overview & Intro

~~Marketing and data visualisation work for impact.com. Designed a range of brand-aligned assets including reports, infographics, and campaign materials.~~

PROJECT PAGE YEAR

2023–2025

PROJECT PAGE SUBSECTIONS (KEEP AS-IS)

Reports & Data Visualisation — Data-heavy reports translated into structured, on-brand visual narratives.

Marketing Assets — Marketing materials for social media and digital campaigns.

Presentation Decks — Structured presentation design for client communication.

> These work as category labels for a showcase-style project. No changes needed.

5. Gymly Member App

HOMEPAGE CARD LABELS

Product Design · UX · Prototype

HOMEPAGE CARD HOOK

Member experience for a gym platform, focused on reducing drop-off through better onboarding and engagement.

~~Designed a mobile gym member experience for a white-label gym membership platform aimed at reducing membership drop-off through improved onboarding, engagement, and motivation.~~

PROJECT PAGE HERO INTRO (MERGED WITH OVERVIEW)

Gymly is a white-label fitness app used by gyms to manage memberships. Completed as part of a Dribbble product design workshop, I designed the core member experience covering onboarding, activity tracking, class discovery, and engagement loops.

> Merged intro + overview. Added honest framing as workshop project. Removed "and support member retention" (redundant with Challenge).

REMOVED Separate Overview

~~Designed the core member experience for a gym platform, covering onboarding entry, activity tracking, class discovery, and engagement loops.~~

PROJECT PAGE YEAR

2023

PROJECT PAGE CHALLENGE

Reduce membership drop-off caused by low motivation, unclear value perception, and difficulty maintaining consistent workout habits. The goal was a lightweight experience that helps users see value quickly and stay engaged.

PROJECT PAGE APPROACH

1. Early value access: Core features accessible before full onboarding completion to reduce friction.
2. Progress visibility: Activity and progress feedback surfaced early to reinforce motivation.
3. Reduced onboarding friction: Setup introduced progressively rather than requiring full completion upfront.
4. Social engagement: Explored features like class invitations, group participation, waitlists, and check-ins to support retention through social visibility.

> Consolidated the sub-list into point 4. Removed "rather than individual tracking alone" (filler).

PROJECT PAGE OUTCOME

Delivered a functional prototype demonstrating low-friction onboarding, clear progress communication, and engagement through individual and social activity.

REMOVED Reflection

~~Retention improves when users experience value early and receive continuous feedback on progress and participation.~~

Explorations (new section)

> New section after Selected Work. Contains self-initiated and experimental projects. Signals initiative and AI fluency without leading with it.

6. Desir

HOMEPAGE CARD LABELS

Creative Direction · AI Imagery

HOMEPAGE CARD HOOK

A fragrance concept art-directed and produced entirely using AI generative tools.

~~Product concept and campaign imagery for a fragrance brand. Defined the creative direction and produced all visuals using generative AI through iterative prompt engineering.~~

> Removed "iterative prompt engineering" (red flag). Moved "self-initiated" here. Shorter, cleaner hook.

PROJECT PAGE HERO INTRO

Already finalized in desir.html. No changes needed.

PROJECT PAGE YEAR

2026

PROJECT PAGE BODY COPY

Already finalized in desir.html. All em dashes removed, language simplified in previous sessions.

7. Pressio

HOMEPAGE CARD LABELS

Product Design · AI-assisted Development

~~Product Design · Vibe-coding · AI~~

> Replaced "Vibe-coding" in the label. It's fine in body copy to describe the method, but as a label it reads as novelty. "AI-assisted Development" is how a HM would categorize this skill.

HOMEPAGE CARD HOOK

Blood pressure tracking app designed for older adults. Built with AI-assisted development, focused on accessibility and simplicity. In progress.

~~Currently building a mobile-first app focused on accessibility and ease of use for older adults, simplifying blood pressure tracking and enabling easy sharing of data with family and doctors.~~

> Shorter. "In progress" instead of "Currently building." Added method (AI-assisted development). Removed "enabling easy sharing of data with family and doctors" (detail for the project page, not the card).

PROJECT PAGE YEAR

2026

PROJECT PAGE HERO INTRO (SUGGESTED)

Pressio is a mobile app for blood pressure tracking, designed for older adults who find existing health apps overwhelming. I'm building it using AI-assisted development (vibe-coding), designing the product and generating functional code through iterative prompting. The focus is accessibility, clarity, and ease of sharing data with family and doctors.

> Suggested intro for when you have screenshots ready. "Vibe-coding" appears here naturally as a method description, not a label. Add screenshots: main tracking screen, data entry flow, sharing/export view, and one showing the simplicity of the interface for older users.

PROJECT PAGE SCREENSHOTS NEEDED

To make this project hold its weight:

1. **Main tracking screen** — shows the core experience and visual simplicity
2. **Data entry flow** — demonstrates accessibility considerations (large targets, clear labels)
3. **Sharing/export view** — the doctor/family sharing feature is a differentiator
4. **Before/after or process** — if available, one screen showing how AI-assisted dev shaped the output

More Work (new section)

> Optional row after Explorations. Thumbnail images with project name + one line each. Shows range without requiring full case studies. Add any projects that didn't get full pages: client logos, illustration work, smaller brand projects, etc.

Global Changes Applied

EM DASHES REMOVED EVERYWHERE

All instances of " — " replaced with periods, commas, or restructured sentences.

"ITERATIVE PROMPT ENGINEERING" REMOVED

Desir homepage hook rewritten without it.

"DESIGNED A SCALABLE..." PATTERN BROKEN

Multiple projects opened with "Designed a scalable..." — this repetition signals template writing. Each hook now starts differently.

ALL REFLECTIONS REMOVED

Five Reflection sections cut. None had specific-enough insights to justify keeping.

TITLE SIMPLIFIED

"Senior Designer" instead of "Senior Designer & Illustrator." Illustration is visible in the work.
