TITLE

Senior Designer

STATEMENT

Design and art direction for brand and product, turning complexity into clarity. Bringing creative intention to AI-assisted work.

Selected Work

1. AMERICAN GREETINGS

Art Direction · Illustration · Visual Systems

HOMEPAGE HOOK

Badge system for American Greetings' membership platform. 30 achievements designed to scale across categories and UI contexts.

PROJECT PAGE INTRO

American Greetings is a greeting card and digital messaging platform. Working with the Digital Design Director, I designed a badge system for their membership product to encourage engagement and repeat usage. The system spans milestones, seasonal achievements, feature exploration, and mobile challenges, all integrated within the platform.

ROLE	TOOLS	YEAR
Art Direction, Illustration	Illustrator, Procreate	2025

CHALLENGE

The badge system needed to scale across 30+ achievements with room to grow, while remaining consistent. Each badge had to work across multiple UI backgrounds without losing clarity. The visuals also needed to feel distinct across categories while staying aligned with the brand.

APPROACH

I explored a few visual directions and selected one that balanced clarity, playfulness, and scalability. A shared badge shape and composition rules kept all designs connected while allowing variation across concepts. Each badge was developed by translating its achievement into a clear visual idea, with future animation considered during design.

OUTCOME

Delivered a complete set of 30+ badges for the initial release, covering multiple categories and use cases within the platform.

2. FARM SANCTUARY

Education · Visual Systems · Infographics

HOMEPAGE HOOK

Visual system spanning the full K-12 range for a Humane Education program, reaching 250,000+ students across the U.S.

PROJECT PAGE INTRO

Farm Sanctuary is a U.S.-based nonprofit focused on animal protection. Working with the Humane Education Programs Manager and marketing team, I designed and illustrated the K-12 Humane Education curriculum covering lesson plans, student materials, teacher guides, and presentations across elementary, middle, and high school levels.

ROLE	TOOLS	YEAR
Art Direction, Illustration, Layout	Illustrator, InDesign, Photoshop, PowerPoint	2017–2019

CHALLENGE

The curriculum needed to meet U.S. educational standards while addressing sensitive topics like animal welfare, food systems, and environmental impact. It also had to work across a wide age range, from young children to teenagers, and be practical for educators in real classroom settings.

APPROACH

I developed a consistent visual language across all age groups. Illustration translated abstract or sensitive topics into clear, accessible visuals while supporting storytelling. Layouts were structured to help educators navigate and use the materials efficiently, focusing on readability, hierarchy, and ease of use.

OUTCOME

The curriculum has been used by educators across the U.S., reaching over 250,000 students. The program received the Excellence Award (2019) and the Educator's Choice Award (2024).

3. ABLE

Product · Illustration · Visual Systems

HOMEPAGE HOOK

Two illustrated directions for onboarding for a health & wellness product tested against real users. The selected style shipped in onboarding for a wellness app.

PROJECT PAGE INTRO

Able is a subscription-based health & wellness app. Working with the Product Lead and with other Product Designers and Illustrators within the Product Design Team, I developed an illustration style for onboarding and in-app experiences, with the goal of establishing a scalable visual direction for ongoing product use and in-app content.

ROLE	TOOLS	YEAR
Product Illustrator	Figma, Illustrator	2021–2022

CHALLENGE

Define an illustration style for onboarding that felt engaging and relatable for first-time users, could scale across onboarding and in-app use, and could be validated through user testing.

APPROACH

Explored multiple illustration directions and refined two for onboarding use. Iterated through team review cycles, then prepared assets for A/B testing focused on engagement and relatability.

OUTCOME

The selected style was implemented in the onboarding flow following A/B testing results. Additionally, explorations for in-app content extension were created.

4. IMPACT.COM

Brand · Marketing · Data Visualisation

HOMEPAGE HOOK

Reports, infographics, and campaign materials for a partnerships management platform. Complex data made visual within an established brand system.

PROJECT PAGE INTRO

impact.com is a partnerships management platform. Working with the marketing director and internal teams, I designed reports, decks, and campaign materials within an established brand system, translating complex data into clear visual communication.

YEAR

2023–2025

SUBSECTIONS

Reports & Data Visualisation — Data-heavy reports translated into structured, on-brand visual narratives.

Marketing Assets — Marketing materials for social media and digital campaigns.

Presentation Decks — Structured presentation design for client communication.

5. GYMLY MEMBER APP

Product Design · UX · Prototype

HOMEPAGE HOOK

Member experience for a gym platform, focused on reducing drop-off through better onboarding and engagement.

PROJECT PAGE INTRO

Gymly is a white-label fitness app used by gyms to manage memberships. Completed as part of a Dribbble product design workshop, I designed the core member experience covering onboarding, activity tracking, class discovery, and engagement loops.

YEAR

2023

CHALLENGE

Reduce membership drop-off caused by low motivation, unclear value perception, and difficulty maintaining consistent workout habits. The goal was a lightweight experience that helps users see value quickly and stay engaged.

APPROACH

1. Early value access: Core features accessible before full onboarding completion to reduce friction.
2. Progress visibility: Activity and progress feedback surfaced early to reinforce motivation.
3. Reduced onboarding friction: Setup introduced progressively rather than requiring full completion upfront.
4. Social engagement: Explored features like class invitations, group participation, waitlists, and check-ins to support retention through social visibility.

OUTCOME

Delivered a functional prototype demonstrating low-friction onboarding, clear progress communication, and engagement through individual and social activity.

Explorations

6. DESIR

Creative Direction · AI Imagery

HOMEPAGE HOOK

A fragrance concept art-directed and produced entirely using AI generative tools.

PROJECT PAGE INTRO

A fragrance concept and campaign system, art-directed and produced entirely through generative AI. The project tests whether disciplined direction and curation can compete with traditional production for a coherent brand world. Self-initiated project.

ROLE **TOOLS** **YEAR**

Concept, Art Direction	Firefly (Gemini 3.1, Nanobanana 2), Weavy	2026

Full project page copy already finalized in desir.html.

7. PRESSIO

Product Design · AI-assisted Development

HOMEPAGE HOOK

Blood pressure tracking app designed for older adults. Built with AI-assisted development, focused on accessibility and simplicity. In progress.

PROJECT PAGE INTRO (SUGGESTED)

Pressio is a mobile app for blood pressure tracking, designed for older adults who find existing health apps overwhelming. I'm building it using AI-assisted development (vibe-coding), designing the product and generating functional code through iterative prompting. The focus is accessibility, clarity, and ease of sharing data with family and doctors.

ROLE	YEAR
Product Design, Development	2026
